PERFORMANCE POLYETHYLENE

VCI

**WE'VE GOT
YOU COVERED**

STRENGTH POWERED BY SCIENCE

Whatever the shape, size, or material, Crayex specializes in protecting your valuable components. You can always rely on us for custom-order packaging and industrial-strength solutions like Volatile Corrosion Inhibitor, or VCI.

Benefits of VCI packaging include:

- ◆ Long lasting corrosion protection
- ◆ Easy and clean application options
- ◆ Effective FDA-grade protection for metals that contact with food
- ◆ Easy storage
- ◆ Flexibility in packaging
- ◆ Reduced packaging time
- ◆ Washing or cleaning of parts no longer necessary
- ◆ Odorless, safe, and non-toxic
- ◆ 100% recyclability

VCI's success in battling corrosion is due to molecules clinging to the part's metal. Even hidden, hard-to-see areas of the part are coated with the molecules, which then bond to the film, creating a solid seal. This chemical-reaction bond keeps out moisture, oxygen, dirt, and other corrosion-causing elements.

For you or your customers, VCI is a convenient solution since the solid bond negates any need for washing or cleaning the parts once they are removed from the protective film. Just unwrap and the part is ready for placement.

Crayex has a team ready to deliver the packaging solutions you need. Our experts in sales, service, production, and quality will work closely with you to get the VCI configurations that are right for your product line. Contact Crayex to learn more about VCI and how to get started with next-level protection.

Designed to protect against rust, corrosion, and oxidation, VCI is a great way to keep metal parts in pristine condition until they are ready for unwrapping and installation.
